## A. Introduction

This appendix provides a County Economic Profile, Vulnerability Profile and a more detailed vulnerability analysis of critical facilities and corresponding maps.

## B. County Economic Profile

This section of the report, and the data contained herein, is provided to capture a profile of the county including geographic and economic characteristics not previously discussed in Chapter I. In addition, many of the critical infrastructure partners including private sector and public utilities identified.

## D. Critical Facility Vulnerability Analysis

Considerable staff resources were expended to update the critical facilities inventory. Specific attention was paid to health care facilities such as hospitals and nursing homes; emergency response agencies, hazardous materials, mobile home parks, schools and colleges and community centers. Where possible, communications resources and community infrastructure, and utilities such as water and wastewater facilities, were located by latitude and longitude and overlaid on the storm tide limits map. Each facility has the name, location, latitude/longitude coordinates, description, critical code and results of the 2010 surge analysis based on the most accurate topographic data and the Sea, Lake and Overland Surges from Hurricanes (SLOSH) model.

The Critical Facility Inventory (database) includes a comprehensive list of critical facilities identified by the State and County Emergency Management agencies. This inventory is not published as part of the report. However, selected facilities that may require evacuation or mitigation, based on vulnerability to storm surge, flooding or fire, or that are located within a county evacuation zone, are identified in the tables that follow. The tables include

- Facility Type Code (see Table IV-12);
- Name, Address, City and Zip code;
- DEM Elev – Elevation of the facility based on the Digital Elevation Model, in feet;
- Evac Zone – County evacuation zone where the facility is located, where “X” means not in a county evacuation zone;
- Surge – Lowest category storm surge zone based on the SLOSH model, where “0” means not in a surge zone;
- Fire – Wildfire Interface / Level of Concern (Yes/No);
- Flood – Freshwater flooding based on the Federal Emergency Management Agency Flood Maps, where “X” means not in a flood zone (see Table II-10); and
- Description of the Facility Type Code.

The illustration below identifies the potential storm surge heights on a county landmark. This illustration is provided for public information purposes only.
