SECTION I
AMENDMENT REPORT
BROWARD COUNTY LAND USE PLAN
PROPOSED AMENDMENT PC 20-3
(POMPANO BEACH)

RECOMMENDATIONS/ACTIONS

I. Planning Council Staff Recommendation

As the proposed amendment has not yet demonstrated compliance with BrowardNext - Broward County Land Use Plan (BCLUP) Policy 2.14.9, Planning Council staff would generally recommend denial. However, due to the unanticipated delay regarding the review of the applicant’s proposed transportation methodology and mitigation strategy, Planning Council staff recommends approval subject to compliance with BCLUP Policy 2.14.9, prior to a second Planning Council public hearing.

II. Planning Council Recommendation

Approval, recognizing the City of Pompano Beach’s General Obligation Bond Complete Street project for State Road A1A and its micro-transit program along Atlantic Boulevard, including not requiring a second Planning Council public hearing. (Vote of the board; Unanimous: 12-0; Blackwelder, Breslau, Brunson, Castillo, Fernandez, Gomez, Graham, Hardin, Maxey, Parness, Rosenof and Stermer)

III. County Commission Final Action

Approved per Planning Council recommendation.

EXPLANATION OF TRANSPORTATION TERMINOLOGY

Year 2040: Long Range Regional Transportation Network

I.T.E.: Institute of Transportation Engineers Trip Generation Manual

Capacity: Capacity at Level of Service D in thousands of vehicles at p.m. peak hour

P.M. Peak Hour: Traffic in thousands of vehicles per peak hour (i.e. one hour measured between 4:00 and 6:00 p.m.)

Annual Average Daily Traffic (A.A.D.T.): The volume passing a point or segment of a roadway in both directions for one year divided by the number of days in the year.¹

Significance Threshold: Corresponding to additional p.m. peak hour trips at three-percent (3%) or more of such capacity of a regional transportation link at the long-range planning horizon per BrowardNext - Broward County Land Use Plan Policy 2.14.9.

LOS: Level of Service² (LOS D is a policy of the Broward County Board of County Commissioners)

A LOS A describes primarily free-flow operations at average travel speeds, usually about 90 percent of the free-flow speed for the given street class. Vehicles are completely unimpeded in their ability to maneuver within the traffic stream. Control delay at signalized intersections is minimal.

B LOS B describes reasonable unimpeded operations at average travel speeds, usually about 70 percent of the free-flow speed for the street class. The ability to maneuver within the traffic stream is only slightly restricted, and control delays at signalized intersections are not significant.

C LOS C describes stable operations; however, ability to maneuver and change lanes in midblock locations may be more restricted than at LOS B, and longer queues, adverse signal coordination, or both may contribute to lower average travel speeds of about 50 percent of the free-flow speed for the street class.

D LOS D borders on a range in which small increases in flow may cause substantial increases in delay and decreases in travel speed. LOS D may be due to adverse signal progression, inappropriate signal timing, high volumes, or a combination of these factors. Average travel speeds are about 40 percent of free-flow speed.

E LOS E is characterized by significant delays and average travel speeds of 33 percent or less of the free-flow speed. Such operations are caused by a combination of adverse progression, high signal density, high volumes, extensive delays at critical intersections, and inappropriate signal timing.

F LOS F is characterized by urban street flow at extremely low speeds, typically one-third to one-fourth of the free-flow speed. Intersection congestion is likely at critical signalized locations, with high delays, high volumes, and extensive queuing.
