Transportation, Land Use & Regional Planning

The findings and recommendations of the Council's "TOD Readiness Report for Select Station Areas" (Report) is providing guidance and direction for the issuance of Requests for Proposals (RFPs) for SFRTA-owned land in station areas. The Report was produced by Council staff in collaboration with SFRTA staff and the Treasure Coast Regional Planning Council (TCRPC).

The RFPs are expected to be focused on the three stations that were found in the Report to have immediate market potential (Boca Raton, Boynton, and Cypress Creek Stations) but may be more broad ranging to maximize benefit to the SFRTA. The goal of the effort to activate station areas, increase ridership, and maximize the benefits to the SFRTA of underutilized land. [Click here for more information.](#)

Allyson Williams | awilliams@sfrpc.com
Regional Planner & Southeast Florida Clean Cities Coordinator

Council staff are in the initial stage of developing a Scope of Work (SOW) to carry out a Travel Behavior Trend Analysis for the Miami-Dade County Transportation Planning Organization (TPO). The study will look to assess, compare, and identify trends in travel patterns prior to the COVID-19 pandemic, during the pandemic related lockdowns ("shelter-in-place" or "stay-at-home" orders), and after the phased reopening of Miami-Dade County.

The primary goal of this effort is to assist the TPO with understanding the impact that the pandemic has had on those that utilize the surface transportation networks in Miami-Dade County, and project future travel behaviors and how these behavioral shifts may impact transportation demand.

The Council staff has started working with the Northeast Florida Regional Council and the other eight Florida RPCs to continue the efforts of the RPCs in the Statewide Regional Evacuation Study Program. This round, Council staff's primary effort will involve revisiting the Behavioral Study (i.e. will people evacuate, what will it take for them to evacuate, will repeated storms increase the likelihood of evacuations, will "false alarms" have the opposite effect, etc.). The effort will also involve updating GIS data such as demographics and location of shelters for inputs in the state evacuation model. The project will be completed June 30, 2021.
