CREDITS AND ACKNOWLEDGEMENTS

Funding was originally authorized by the Florida Legislature through House Bill 7121 for the 2010 preparation and publishing of the Statewide Regional Evacuation Studies, as a result of the 2004 and 2005 hurricane seasons. Provisions of this bill require the Florida Division of Emergency Management (FDEM) to update all Regional Evacuation Studies in the State, and inexorably tied the Evacuation Studies and Growth Management. As a result, this study addresses both Emergency Management and Growth Management data needs. Funds are continually requested through the Federal Emergency Management Agency (FEMA) Emergency Management Performance Grant (EMPG), with all money administered through FDEM, 2555 Shumard Oak Blvd.,

Tallahassee, 32399. Web site: www.floridadisaster.org.

The Council acknowledges and extends its appreciation to the following agencies and people for their cooperation and assistance in the development of this document:

CDM Smith for the methodology and framework of the evacuation transportation model. A special thanks to the **Florida Department of Transportation** for their continued input and coordination.

INTRODUCTION

This volume contains the data used in the evacuation transportation analysis presented in Volume 4-11. The data is divided into seven different sections, with the first five sections representing the “input” data that was used to develop the transportation analysis model. The last two sections represent the “output” data for each of the different model scenarios. Volume 4-11 contains a detailed discussion about each of these data items and how the information presented here was used in the analysis. The seven sections include the following:

Section A – Transportation Evacuation Zone (TEZ) Data

Section B – Model Network Attribute Data

Section C – Shelter Database

Section D – Behavioral Data

Section E – Evacuation Zones

Section F – Model Output for Base Scenarios

Section G – Model Output for Operational Scenarios

Model Network Attribute Data

This page intentionally left blank.

The model network for the South Florida Region illustrated in the figures on the following pages can be viewed in more detail using the travel demand model software (CUBE) or ArcGIS. Attribute data for every link in the network is also available, including the following attributes:

A & B Attributes: Attribute 'A' indicates "from node" and attribute 'B' indicates "to node".

DISTANCE: This attribute contains the link distance. Values are in miles.

FTYPE: This attribute indicates the physical type of facility. Facility type is used as an index to the speed/capacity file to determine the free flow speed and capacity per lane of each link. Two-digit facility type codes were used. **Table B.1** identifies the two-digit facility type codes as approved by the Florida Model Task Force.

ATYPE: This attribute indicates the land use characteristics of areas traversed by links. Area type is used as an index to the speed/capacity file to determine the free flow speed and capacity per lane of each link. Two-digit area type codes were used. **Table B.2** illustrates the two-digit area type codes used in FSUTMS.

LANE: This attribute indicates the 2006 number of lanes per direction. This is one of three attributes used to calculate link speeds and capacities, the other two being facility type and area type.

DENSITY: This attribute indicates the number of vehicles that can be stored on a given link. This attribute is linked to the DISTANCE attribute. A 25 feet-per-vehicle length per lane was used to estimate the vehicle density on each link.

CAP: This attribute holds the per lane capacity of any given link. The capacities values are automatically populated from the Speed/Capacity lookup tables during the network processing stage.

RPC_TXT: This attribute identifies the RPC in which any given link is located.

RPC_NUM: This attribute identifies links numerically by RPC.

COUNTY_NUM: This attribute identifies in which County any given link is located.

COUNTY_TXT: This attribute identifies links by the County name.

EVAC_RTE: This attribute identifies if a given link is designated as an evacuation route by the respective RPC.

STATE: This attribute identifies the state in which any given link is located.

CONTRA_PLN: This attribute identifies whether a given link is part of a facility that is part of a contra-flow plan.

CONTRA_LNS: This attribute identifies the number of lanes to be used for a given link during contra-flow conditions.

Reading the Planning Assumption Tables

Columns

Columns in tables represent threats posed by category 1, 2, 3, 4, and 5 hurricanes.

Rows

Rows in tables represent evacuation zones based on anticipated storm surge inundation: i.e., areas for which officials would issue evacuation notices due to the threat of storm surge and waves generated by category 1, 2, 3, 4, and 5 hurricanes. The sixth row in tables represents areas inland of the reach of storm surge inundation. Evacuation notices in inland areas (sixth rows of tables) would apply only to mobile homes and manufactured housing.

Cells

Cells in tables represent the evacuation behavior of residents living in the respective evacuation zone when faced with each of the five hurricane threats, e.g., response in a category 3 hurricane by residents living in a category 1 surge evacuation zone. All figures are percentages – either percent of residents in the zone, percent of evacuees from the zone, or percent of available vehicles.

Manufactured Homes

In most of the State, residents in manufactured homes are given the same evacuation notices as residents of mobile homes. Emergency management officials indicated that, in at least some of the South Florida counties, newer manufactured homes are required to receive the same permits as site-built homes and treated as site-built homes in evacuations. If this policy continues, the planning assumptions for site-built homes should be applied to manufactured homes.
