## I. DEMOGRAPHIC AND LAND USE ANALYSIS

### A. Population Characteristics and Their Implications for Evacuation Dynamics

#### 1. Overall Population<sup>1</sup>

In February 2007, the University of Florida's Bureau of Economic and Business Research (BEBR) estimated that the permanent resident population of Broward County on April 1, 2006, was 1,753,162 (Table IA-1a), up by 130,144 (8.0%) from the 2000 Census. Broward is the second largest county in Florida, but it placed sixth in absolute growth in the State over that period. BEBR projects the population will reach 1,869,913 in 2010 and 2,005,703 in 2015, which represents increases of 15.2% and 23.6%, respectively, in comparison to the 2000 Census. The projection for 2015 also represents an increase of more than 250,000 (14.4%) above the baseline population in 2006, which would place Broward County third in the State, behind Miami-Dade and Orange, in absolute growth for the period.

#### 2. Group Quarters Population

In 2000, there were 19,960 Broward County residents living in group quarters (1.2% of the population); 12,981 of these were institutionalized in correctional facilities, nursing homes, and juvenile institutions, while the other 6,979 were in other group quarters, such as college dormitories, group homes and military quarters (Table IA-11a and Map P5). Some of these group quarters were located on the barrier island. The remaining

---

<sup>1</sup> Population estimates and projections customarily distinguish between the *permanent resident population* in a jurisdiction (people who reside in the location year-round or at least half of the time) and the *seasonal population* (people who reside in the location only a portion of the year or who are visitors, such as tourists). The permanent resident population is further broken into those who reside in *households* (occupied housing units) and those who are in *group quarters*, such as correctional facilities, nursing homes, military quarters, group homes, etc. The decennial census and the Census Bureau's new American Community Survey (ACS) present results for the permanent resident population, but not for the seasonal population. However, both the census and the ACS present data on vacant housing units, including those that are for seasonal use. Typically, local jurisdictions use these seasonal housing unit estimates, along with hotel and motel inventories, to prepare estimates and projections of the seasonal population for planning purposes. The estimates and projections prepared by the University of Florida's Bureau of Economic and Business Research (BEBR) also refer to the permanent resident population. Most of the data presented in this section is drawn from the sample portion of the 2000 Census of Population and Housing (Summary File 3) and from the 2006 ACS. The latter was tabulated only for the 40 counties that had a 2006 population of at least 65,000 permanent residents, so there is no 2006 ACS data for the 27 smallest counties in the State of Florida – in those counties, the 2006 tables will show "N.A." in all cells. Note that the annual ACS is collected for a much smaller sample than the 2000 Census, resulting in much larger margins of error. In addition, there are differences in the methodology that can affect the meaning of the data collected. As a result, comparisons should be made with caution. In some cases, although 2006 ACS data was tabulated for a county, the small sample size resulted in insufficient data to fill all of the cells in a given table – in those cases, the 2006 tables will show "N.A." in selected cells.

1,603,058 residents lived in households. In 2006, the group quarters population was still above 19,000, or about 1.1% of the total (Table IA-11b). Although the total population in group quarters was not significantly different, the age composition changed during the period – in 2006, only 30.9% of the group quarters population was 65 years or older, down from 43.5% in 2000. Still, this was higher than the proportion of elderly in group quarters in the State of Florida in 2006 (24.2%).

### **3. Housing Units by Type**

Of the 741,043 housing units in Broward County at the time of the 2000 Census, 40.9% were single-family, 55.3% were multi-family, and the other 3.8% were mobile homes, boats, recreational vehicles (RVs) or others used as dwelling units (Table IA-4a). Of those units, 86,598 (11.7%) were vacant (Map H2), with the highest vacancy rates found among multi-family buildings (condos, many of which are on the barrier island) and among mobile homes. Mobile homes, boats and RVs are a much smaller component of the housing stock in Broward than in the State of Florida as a whole, where 12.0% of all units were classified in this category. Maps H5 and H6 show that most mobile homes, boats and RVs in Broward County in 2000 were concentrated west of Interstate 95, and none were located east of US 1. According to the 2006 ACS (Table IA-4b), the total number of housing units in the County increased by over 7% (more than 55,000 new units), while the number of vacant units rose by 32% to over 114,000 (14.4% of the total). The proportion of single-family units rose to 45.6% while the proportion of multi-family fell to 51.8%, which is still much higher than the average share of multi-family units in the State of Florida in 2006 (32.5%). In the same period, the number of mobile homes, boats, recreational vehicles and other units declined, from 27,930 to about 25,000.

### **4. Occupied Housing Units (Households)**

There were 654,445 occupied housing units (households) in Broward County in 2000, 69.4% of which were occupied by owners and 30.6% by renters (Table IA-4a). By 2006 (Table IA-4b), the number of households had risen by over 4% to more than 682,000, while the proportion of owner-occupied units rose to 70.7%.

### **5. Household Size**

In 2000, the average household size (number of persons per occupied unit) in Broward County was 2.45 (Table IA-5a), which was close to the State of Florida average of 2.46. Renters, who are mostly concentrated in multi-family units, had a lower household size (2.31) than owners (2.51), who are more heavily concentrated in single-family units. The highest household sizes were more concentrated in the western portions of the county where single-family units predominate (Map H4). Contrasting with trends over the previous two decades, the average household size rose in Broward County between 2000 and 2006 (Table IA-5b), to 2.59 (the State average rose to 2.49). In addition, the average size of renter households closed the gap with owner households, rising to 2.60 in 2006 (ACS). This likely reflects the changing age composition of the population in recent years, as well as the increasing difficulty of finding affordable housing.

## 6. Seasonal Dwelling Units

In 2000 there were 49,873 vacant dwelling units in Broward County that were for seasonal, recreational or occasional use (Table IA-6a and Map H1), representing 6.7% of all units. Many of these were located on the barrier island and in vulnerable areas east of US 1. By 2006 (Table IA-6b), this number had increased by 17% to more than 58,000 units. According to licensing records of the Florida Department of Business and Professional Regulation (Table IA-3), in 2007 there were 132 hotels with 20,158 rooms, 299 motels with 8,676 rooms, and 3 bed and breakfast inns with 15 rooms in Broward County. Together, these units house a seasonal population that is in addition to the permanent resident population estimated above. Considering that many of these units are in vulnerable areas, the proportion of seasonal units and hotel/motel units that are occupied at any point in time will have an important impact on the total population that may participate in an evacuation.

## 7. Vehicles per Household

There were 61,191 Broward County households in 2000 that had no vehicle (9.4%), roughly evenly split between owners and renters (Table IA-7a). This was higher than the average for the State of Florida as a whole (8.1%), and represents a significant number of households that could need transportation assistance in the event of a major evacuation. Map H8 shows that many of these households are located in coastal areas that are susceptible to storm surge. Between 2000 and 2006 (Table IA-7b), the number of households with no vehicle decreased by 12,000 to 49,000. Households with a large number of vehicles were more concentrated in the western part of the county in 2000 (Map H9). The number of households with 2 or more vehicles rose from 307,000 in 2000 to 358,000 in 2006, and the total number of vehicles in households increased to 1.1 million, up 131,000 in 6 years. In other words, the number of vehicles per household in Broward County rose from 1.51 to 1.64 between 2000 and 2006 (Tables IA-8a and IA-8b), which could contribute to additional congestion on the highways in evacuation scenarios.

## 8. Age Composition

In 2000, the population of Broward County included 260,409 people who were at least 65 years old, which represented 16.0% of the total population (Table IA-9a); this compared to 17.6% for the State of Florida as a whole. Almost a third of these elderly residents (83,050) lived alone (Table IA-11a), and many lived in coastal areas (Maps P6 and P7). Moreover, 42,447 residents (2.6% of the total) were at least 85 years old. By 2006 (Table IA-9b), the elderly population had declined by almost 10,000, to 14.0% of the total population, and the number living alone had dropped by more than 6,000 (Table IA-11b). During the same period, the number of children under 18 increased by 46,000, from 381,461 (23.5%) to 427,000 (23.9%). In 2006, 310,000 Broward County children were of school age (5 to 17 years old), up from 279,285 in 2000.

## 9. Race / Ethnicity

The Hispanic or Latino population, which includes those born abroad as well as those born into Hispanic families in the United States, included 271,523 residents (16.7% of

the total population) in 2000 (Table IA-10a), and increased by another 137,000, to 22.8% of the total, in 2006 (Table IA-10b). The Black or African American population, which in South Florida includes many people from the Caribbean and Central and South America, also grew significantly, from 329,749 (20.3% of the total) in 2000 to 442,000 (24.7%) in 2006. Each of these two groups is projected to grow to about 27.0% of the County's population in 2015, while the White, non-Hispanic population declines to 42.0%.

## **10. Place of Birth and Citizenship**

In 2000, one out of every four Broward County residents (410,387) was born abroad (Table IA-12a and Map P11). By 2006, there were another 125,000 foreign-born residents living in Broward County, and the proportion had increased to 3 out of 10 (Table IA-12b). The vast majority (71.6%) of these residents in 2000 came from the Caribbean and Central and South America – the largest groups were from Jamaica (60,241), Haiti (47,445), Cuba (32,572) and Colombia (32,459). More than half of the foreign-born residents in 2000 (226,746) were not citizens (Map P10), a number which increased by more than 58,000 in the first six years of this decade. In addition, almost half of the residents of Broward County in 2000 (46.8%) were born in other parts of the United States. The remaining residents (27.9%) were born somewhere in the State of Florida.

## **11. Linguistic Isolation**

As a result of the growth in the diversity of the population in Broward County, the level of linguistic isolation (households where no one 14 years or older speaks English "very well") also is growing. In 2000, 41,107 households (6.3%) were classified as linguistically isolated (Table IA-13a and Map P9) – Spanish was spoken in over half of these, but the availability of radio and television broadcasts in Spanish, as well as many service providers who speak Spanish, makes this less problematic in Broward County. Still, there were 19,668 linguistically isolated households in 2000 where a language other than Spanish was spoken (Map P8), and this number increased by 2,700 households (13.9%) in the first six years of this decade (Table IA-13b).

## **12. Labor Force**

In 2000, 37.3% of the population 16 years old and over of Broward County was not in the labor force (Table IA-15a and Map P14); this was smaller than the share of the inactive population in the State of Florida as a whole (41.3%). The unemployment rate in Broward County (5.3%) was below the state average (5.5%). By 2006, the inactive population in Broward County had fallen to 33.8%, compared to 39.0% in the State of Florida (Table IA-15b).

## **13. Poverty Status**

There were 184,589 residents in 2000 (Table IA-16a) that lived in households with incomes below the poverty level (11.5% of the total population). Poverty rates were highest among children (15.7%), but 10.0% of elderly residents also lived below the poverty level (Map P16). While the overall poverty rate fell slightly between 2000 and

2006 (Table IA-16b), to 11.2%, the rate for the elderly population rose to 11.4%. The poor elderly, especially those living alone, may represent a significant portion of those households without vehicles, which constitutes a substantial challenge for evacuation planning.

#### **14. Small Area Dwelling Unit and Population Data**

Broward County produces its own dwelling unit, household and population estimates and projections for traffic analysis zones (TAZs) and municipalities at 5-year intervals out to 2030, in cooperation with the Broward County Metropolitan Planning Organization (MPO). In early 2007, modifications were made to the TAZ base map for the County, increasing the number of TAZs from 902 to 921, as a result of growth in new areas. The County's resident population estimates and projections were updated for the new TAZs in late 2008 (see Table BCTAZ). The county totals for 2006 are essentially the same as estimates published by the Bureau of Economic and Business Research (BEBR) for April 1, 2006, at 1,745,713 (0.4% lower). However, Broward County's projections for 2010 and 2015 are lower than BEBR's: 1,769,403 in 2010 (5.4% lower) and 1,873,245 in 2015 (6.6% lower). Projections published by BEBR in subsequent years (after 2006) fell, bringing them closer to the small area estimates and projections developed by Broward County. The County's 2010 projections include 813,533 dwelling units and 675,830 households, while the 2015 projections include 836,735 dwelling units and 704,179 households. This small-area data, supplemented by TAZ estimates and projections of hotel/motel units, was used in traffic modeling.

Maps BC1 and BC2 show the projected change in housing units between the baseline in 2006 and the projection years of 2010 and 2015, respectively. Maps BC3 and BC4 show the projected change in households (occupied housing units) between the baseline in 2006 and the projection years of 2010 and 2015, respectively. Maps BC5 and BC6 show the projected change in population between the baseline in 2006 and the projection years of 2010 and 2015, respectively. For Broward County, most of the projected growth will occur in infill areas around the county, with very little growth projected for the areas most vulnerable to surge along the barrier island and the eastern coastline.

### **B. Future Land Use Analysis**

Broward County has the seventh largest total area in the State of Florida, with 844,710 acres (1,320 square miles). Approximately 1,205 square miles are land area, and 114 square miles (8.7%) are water. It is bounded on the north by Palm Beach County, on the east by the Atlantic Ocean, on the south by Miami-Dade County, and on the west by Collier County and Hendry County. With 31 municipalities in 2006, the unincorporated portion of the county was home to fewer than 28,000 residents, about 1.6% of the county total.

Only the eastern third of Broward County (410 square miles) is considered to be suitable for development. Almost half a million acres (58.3%), most of which is in the westernmost part of the county, is held in conservation (see Table IA-17 and Map BC7). The western part of the county also includes areas that are within the Big Cypress Seminole and Miccosukee reservations. This environmentally sensitive area includes Water Conservation Areas that are essential components of the larger Everglades system and are host to a wide variety of species. There are another 10,000 acres (1.2%) set aside within the developed portion of

the county for recreation and open space. An additional 25,000 acres (3.0%), currently classified as agriculture, located mostly on the western edge of the developed area, form a buffer between developed areas and the conservation areas – most of this land, however, is not engaged in agricultural activities.

The developed portion of Broward County to the east is largely built out. This means that future development will be mostly based on infill and redevelopment. Within this area, residential future land uses account for nearly 140,000 acres, most of which (12.2% of the total area) is reserved for medium-density. Another 2.5% is classified as low-density residential and the other 1.8% is for high-density residential. Residential uses are spread throughout the county, although most of the low-density can be found in the southwestern and northwestern corners. A significant amount of high-density residential land can be found along the eastern portion of the county, including on or adjacent to the barrier island.

Broward County also has a significant inventory of industrial future land uses, with almost 62,000 acres (7.3% of the total), followed by commercial/office with 27,000 (3.2%), mixed-use (1.0%) and institutional/government (0.7%).

**Table IA-1a. Resident Population<sup>2</sup> by Age, April 1, 2006, 2010 and 2015**

Broward County Age Categories	Absolute Number			% of Total Population		
	2006	2010	2015	2006	2010	2015
Age under 5 years	109,382	114,916	121,798	6.24%	6.15%	6.07%
Age 5 to 17 years	304,711	320,009	333,344	17.38%	17.11%	16.62%

<sup>3</sup> A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have direct access from the outside of the building or through a common hall. Both occupied and vacant housing units are included in the housing unit inventory. Boats, recreational vehicles (RVs), vans, tents, and the like are housing units only if they are occupied as someone's usual place of residence. Vacant mobile homes are included provided they are intended for occupancy on the site where they stand. Vacant mobile homes on dealers' lots, at the factory, or in storage yards are excluded from the housing inventory. Also excluded from the housing inventory are quarters being used entirely for nonresidential purposes, such as a store or an office, or quarters used for the storage of business supplies or inventory.

<sup>4</sup> Tables IA-5a and IA-5b present the number of residents in the occupied housing units shown in Tables IA-4a and IA-4b for 2000 and 2006, respectively, by type of housing unit. They also show the average number of residents by type of housing unit, which can be used in transportation models to estimate the number of evacuating people.

<sup>5</sup> Vacancy status and other characteristics of vacant units were determined by census enumerators obtaining information from landlords, owners, neighbors, rental agents, and others. Vacant units for seasonal, recreational, or occasional use are vacant units used or intended for use only in certain seasons, for weekends, or other occasional use throughout the year. Seasonal units include those used for summer or winter sports or recreation, such as beach cottages and hunting cabins. Seasonal units also may include quarters for such workers as herders and loggers. Interval ownership units, sometimes called shared-ownership or time-sharing condominiums, also are included in this category. Vacant migrant worker units include those intended for occupancy by migrant workers employed in farm work during the crop season. (Work in a cannery, a freezer plant, or a food-processing plant is not farm work.)

<sup>7</sup> Race and ethnicity are separate categories in both the 2000 Census and the 2006 American Community Survey (ACS). For each person the surveys included two separate questions. The first asks whether each person in the household considers himself/herself to be of Hispanic or Latino origin (ethnicity). The second asks each person in the household to identify one or more racial categories that should be used to classify his/her racial makeup. Both questions request the respondent to classify himself/herself, rather than having a Census Bureau employee assign a classification. The tables presented here are cross-tabulations of the two characteristics. Race is tabulated into three categories: (1) White persons who identified only one race (White alone); (2) Black or African American persons who identified only one race (Black or African American alone); and (3) persons of other races who identified only one race (Other race alone) and those who identified two or more races, combined into a single category. For each race category, the totals were calculated for those who indicated that they were of Hispanic or Latino origin and those who indicated that they were not.

<sup>8</sup> A household includes all of the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householder's family in census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone (nonfamily households).

<sup>9</sup> A household in which no person 14 years old and over speaks only English and no person 14 years old and over who speaks a language other than English speaks English "very well" is classified as "linguistically isolated." In other words, a household in which all members 14 years old and over speak a non-English language and also speak English less than "very well" (have difficulty with English) is "linguistically isolated." All the members of a linguistically isolated household are tabulated as linguistically isolated, including members under 14 years old who may speak only English.

<sup>10</sup> The data on disability status were derived from answers to two long-form questionnaire items. The first was a two-part question that asked about the existence of the following long-lasting conditions: (a) blindness, deafness, or a severe vision or hearing impairment (sensory disability) and (b) a condition that substantially limits one or more basic physical activities, such as walking, climbing stairs, reaching, lifting, or carrying (physical disability). This question was asked of a sample of the population 5 years old and over. The second was a four-part question that asked if the individual had a physical, mental, or emotional condition lasting 6 months or more that made it difficult to perform certain activities. The four activity categories were: (a) learning, remembering, or concentrating (mental disability); (b) dressing, bathing, or getting around inside the home (self-care disability); (c) going outside the home alone to shop or visit a doctor's office (going outside the home disability); and (d) working at a job or business (employment disability). Categories (a) and (b) were asked of a sample of the population 5 years old and over; (c) and (d) were asked of a sample of the population 16 years old and over. For data products that use a disability status indicator, individuals were classified as having a disability if any of the following three conditions were true: (1) they were 5 years old and over and had a response of "yes" to a sensory, physical, mental or self-care disability; (2) they were 16 years old and over and had a response of "yes" to going outside the home disability; or (3) they were 16 to 64 years old and had a response of "yes" to employment disability.

<sup>11</sup> In response to evidence suggesting that mail respondents reported certain disabilities in error in the 2000 Census and in the initial years of the ACS, the Census Bureau introduced changes to the ACS questionnaire starting in 2003. Initial review of the data shows that the question redesign had the expected effect on mail respondents, lowering the rates of disability overall by reducing over-reporting in go-outside-home disability and employment disability after the change. This change affected primarily the respondents in the age range from 16 to 64 years, and makes comparisons between results of the 2000 Census and the 2006 ACS inappropriate. The 2006 ACS is believed to have more reliable results.
